

Make a Wind Turbine!

Colour in your template, cut it out ✂ and carefully push a hole through the circles.

1. Carefully cut a hole all the way through a straw, approximately 2-3cm down from the top of the straw. (It may be easier to do this with a hole punch.)
2. Get a paper fastener and put it through the holes on the blades of your turbine template, then push it through the middle hole.
3. Finally put the fastener through the hole in the straw and secure at the back.
4. Your wind turbine is ready to turn!
